SUPPLIER ONBOARDING AGENT · PRESENTER GUIDE

Demo recording script

Everything you need to record the 3-minute demo video: what to set up, then for every scene what to click, what to point at, and what to say.

Length: **about 3:00** | Opening: **45 s story** | Scenes: **8 clicks** | Cost per run: **$0** (saved answers) | Rehearse: **as many times as you like**

Before you record

1. Open **http://localhost:8000** in your browser. If the page doesn't load, open Terminal in the project folder and run:

   ```
   .venv/bin/uvicorn app.main:app --port 8000
   ```

2. Make the browser full screen. If the page doesn't fit, zoom out to 90% with **Cmd + −**.
3. Do one full practice run, then click **Start over**.
4. Start the screen recorder. QuickTime: **File → New Screen Recording**, then choose to record the browser window.

The run

The story follows Sara, a procurement officer. She is an illustrative character, not a real person; the numbers she hears about are real and sourced on the start page.

CLICK what to press | POINT AT where to move the mouse | SAY your voice-over

~12 s

0:00

Meet Sara

POINT AT — The start page, top. Let the headline sit on screen.

SAY — *“Nowadays, every company runs on suppliers. Meet Sara. She works in procurement at a company in Riyadh. Every week, new suppliers email her their papers: the commercial registration, the VAT certificate, the bank letter, the GOSI certificate. Some scanned, some in Arabic, named things like ‘document1.pdf’.”*

0b

~13 s

0:12

Sara's week

CLICK — **Why this matters ↓**

POINT AT — The five manual steps on the left, then “18.8 days”.

SAY — *“Sara opens every file, checks every number on the government websites, and chases suppliers about expired certificates. At big companies, this takes almost three weeks for a single supplier.”*

0c

~15 s

0:25

The email that costs money

POINT AT — The red “74%” card.

SAY — *“Then one morning, a supplier she knows writes: ‘We've changed banks. Please send our next payment to this new account.’ Same name, same signature. Only the email address is one letter off. That's how payment fraud works. In one 2025 survey, three out of four US companies were hit by emails just like it.”*

0:40

The turn

POINT AT — The grey box under the numbers.

SAY — *“Sara doesn't need another portal. She needs a colleague inside her inbox who checks everything, never gets tired, and never changes bank details without a phone call. So we built one.”*

CLICK — Scroll back up, then **Start the guided demo**. If it isn't on the first step, click **Start over** once.

Al Noor applies, and the agent finishes alone

CLICK — **Start: send the first email**. Wait until the button stops saying “Please wait…”.

POINT AT — The right panel, which reads each PDF and then says “Checked 17 things: all good”. Then the table, where two documents are in Arabic.

SAY — *“Here's Sara's inbox. Al Noor sends four documents, two of them in Arabic. The agent reads them, checks the government registries, matches the names and numbers, and approves Al Noor. Sara didn't lift a finger.”*

1:06

Rawabi: an expired certificate

CLICK **Next supplier**

POINT AT The yellow “Expired on…” row, then the email the agent wrote underneath.

SAY *“A routine problem, so it doesn't bother anyone. It emails the supplier asking for exactly that document.”*

3
~8 s
1:21

Rawabi replies

CLICK **Rawabi replies**

POINT AT Rawabi turning green: “Onboarded · no person needed”.

SAY *“The reply comes in. It checks only the new document and approves them.”*

4

1:29

Gulf Steel: the bank account belongs to someone else

CLICK **Next email**

POINT AT The red card, with the two company names side by side.

SAY *“Here the bank account belongs to a different company, a classic fraud pattern. The agent stops, doesn't contact the supplier, and puts it in front of Sara.”*

Don't press the buttons on this red card. Leave it open.

5
~22 s
1:47

A fake email asks to change Al Noor's bank

CLICK **Next email**

POINT AT The sender address (`.co` instead of `.com.sa`), the different bank, the red flags, then the phone number.

SAY *“And here's that email from Sara's story: someone pretending to be Al Noor, one letter off. The agent can't change bank details at all. It freezes the request, holds payments, and tells Sara to call the number already on file.”*

6
~8 s
2:09

You call Al Noor and reject it

CLICK **Call Al Noor and reject**

SAY *“Sara calls Al Noor. They never asked. She rejects it, and not one riyal moves.”*

7
~15 s
2:17

Eleven months later

CLICK **Jump 11 months ahead**

POINT AT “Approved vendors” on the left.

SAY *“The job never ends. Al Noor's registration expires in 20 days, so it asks for the renewal now. Rawabi's certificate has lapsed, so their payments are on hold.”*

8
~28 s
2:32

The results

CLICK **Finish**, then scroll up a little.

POINT AT The green “How well it works” strip.

SAY *“We tested it on 57 cases it had never seen: 100% right decisions, every fraud attempt stopped, no honest supplier wrongly flagged, about 7 cents per supplier. So, back to Sara. This morning: five emails. Three handled without her. She stepped in twice, both times to stop possible fraud. Our agent onboards suppliers, then guards them.”*

Tips

Wait for the green button
While it says “Please wait…”, the agent is still working. Each scene takes a few seconds.

Rehearse freely
Click **Start over** any time. Every run uses saved answers and costs nothing.

Keep the order
Use only the green button during the recording, not the “Manual controls”. The saved answers rely on the scenes running in order.

Recording in parts?
Don't click Start over between parts. Just continue with the next green button.

Speed it up later
In editing, speed up the waits between clicks 2–4× so the whole video stays under 3:00.

If something goes wrong

What you see	What to do
The page doesn't load	The app isn't running. Start it with the Terminal command in “Before you record”.
The button stays on “Please wait…” for more than 20 seconds	Refresh the page (Cmd + R), click **Start over**, and run the scenes again from the start.
“Something went wrong” appears under the button	A scene was run out of order. Click **Start over** and use only the green button.
Terminal says “address already in use”	The app is already running. Just open http://localhost:8000.
