THE SEAL · PRESENTER GUIDE

Demo recording script

Everything you need to record the 3-minute video: setup, the keys, and for every step what to press, what to point at, and what to say.

Length: **about 3:00** | Opening: **45 s story** | Steps: **9** | Cost per run: **$0** (replay of recorded runs)

Rehearse: **as many times as you like**

Before you record

1. Make sure The Seal is running in replay mode. If **http://localhost:8000** doesn't load, open Terminal in the project folder and run:

   ```
   REPLAY=1 ANTHROPIC_API_KEY= .venv/bin/uvicorn app.main:app --port 8000
   ```

2. Open **http://localhost:8000/dashboard**, make the browser full screen, and press `R` to start over. The inbox should be empty.
3. Rehearse once with the narration showing: press `H` to show it, read along, press `R` at the end. Press `H` again to hide it. While it's hidden, nothing presenter-related is on screen.
4. Go to **http://localhost:8000** (the start page) for the opening, and start the screen recorder. QuickTime: **File → New Screen Recording**.

The keys

`N` or `→`
Next event: the next email arrives, or the next step happens.

`B`
Back one step (replays everything up to the step before).

`R`
Start over with an empty inbox.

`H`
Show or hide the narration panel. Keep it hidden while recording.

The run

The story follows Sara, a procurement officer. She is an illustrative character, not a real person; the numbers she hears about are real and sourced on the start page. Times in the headings are the demo clock shown in the app.

`CLICK` what to press `POINT AT` where to move the mouse `SAY` your voice-over

0a

~12 s

0:00

Meet Sara

`POINT AT` The start page, top. Let the headline sit on screen.

`SAY` *“Nowadays, every company runs on suppliers. Meet Sara. She works in procurement at a company in Riyadh. Every week, new suppliers email her their papers: the commercial registration, the VAT certificate, the bank letter, the GOSI certificate. Some scanned, some in Arabic, named things like ‘document1.pdf’.”*

0b

~13 s

0:12

Sara's week

`CLICK` **Why this matters ↓**

`POINT AT` The five manual steps, then “18.8 days”.

`SAY` *“Sara opens every file, checks every number on the government websites, and chases suppliers about expired certificates. At big companies, this takes almost three weeks for a single supplier.”*

0c

~15 s

0:25

The email that costs money

`POINT AT` The red “74%” card.

`SAY` *“Then one morning, a supplier she knows writes: ‘We've changed banks. Please send our next payment to this new account.’ Same name, same signature. Only the email address is one letter off. In one 2025 survey, three out of four US companies were hit by emails just like it.”*

0d

~8 s

0:40

The turn

SAY — *“Sara doesn't need another portal. She needs a colleague inside her inbox that checks everything and never changes bank details without a phone call. So we built one. It's called The Seal.”*

CLICK — Scroll up, then **Open The Seal →**. The inbox is empty and the clock reads Sunday 1 November, 08:55.

1

~22 s

0:48

Sunday 09:12 · Al Noor applies

CLICK — Press **N**. The email lands in the inbox and The Seal works through it step by step.

POINT AT — The documents filling in one row at a time on the right, then “Ran 17 checks: 17 passed”. Then click the Arabic **Commercial registration** row: the viewer shows the page, “Identified as Commercial registration” and the highlighted Arabic title it used. Press **Esc**.

SAY — *“Here's Sara's inbox. Al Noor sends four documents, two of them in Arabic. The Seal reads each one and shows exactly why: this is a commercial registration because of this title, and this is the number it read. It checks Wathq and ZATCA, matches names and numbers across documents, and approves Al Noor. Sara didn't lift a finger.”*

2

~12 s

1:10

Sunday 10:40 · Rawabi applies

CLICK — Press **N**.

POINT AT — The amber “Expired 10 Oct 2026” row, then “Sent by The Seal” under the email on the left.

SAY — *“Rawabi's VAT certificate has expired. That's routine, so The Seal doesn't bother anyone. It emails Rawabi asking for exactly that document.”*

3
~10 s
1:22

Tuesday 14:05 · Rawabi replies

CLICK — Press **N**. The clock moves forward two days.

POINT AT — The “2 days later” divider in the activity, and the old VAT row: “replaced by renewed copy”.

SAY — *“Two days later Rawabi replies. The Seal reads only the new certificate, re-runs every check, and approves them.”*

4
~14 s
1:32

Tuesday 15:30 · Gulf Steel applies

CLICK — Press **N**.

POINT AT — The red card with the two company names side by side, and the bell in the top bar showing 1.

SAY — *“Here the bank account belongs to a different company, a classic fraud pattern. The Seal stops, doesn't contact the supplier, and asks Sara.”*

5
~6 s
1:46

Sara rejects Gulf Steel

CLICK — **Reject supplier** on the red card, then press **N** to move on.

SAY — *“Sara agrees. Rejected.”*

6
~22 s
1:52

Wednesday 08:47 · the fake bank-change email

CLICK — Press **N**.

POINT AT — The sender (`alnoor-trading.co`, not `.com.sa`), the two red flags, then the phone number on file.

SAY — *“And here's that email from Sara's story: someone pretending to be Al Noor, one letter off. The Seal can't change bank details at all. It freezes the request, holds payments, and tells Sara to call the number already on file.”*

7
~8 s
2:14

Sara calls Al Noor

CLICK — **They didn't ask: reject**, then press **N**.

SAY — *“Sara calls Al Noor. They never asked. She rejects it, and not one riyal moves.”*

8
~15 s
2:22

Eleven months later · the expiry scan

CLICK — Press **N**. The clock runs forward to 30 September 2027 and the Approved vendors page opens.

POINT AT — The expiry scan table: vendor, document, expiry date, action taken.

SAY — *“The job never ends. Al Noor's registration and Rawabi's VAT certificate expire within a month, so The Seal asks both to renew. Rawabi's GOSI certificate has lapsed, so their payments are on hold.”*

9
~23 s
2:37

The results, and back to Sara

CLICK — **About** at the bottom of the sidebar.

POINT AT — The test results line.

SAY — *“We tested it on 57 cases it had never seen: 100% right decisions, every fraud attempt stopped, no honest supplier wrongly flagged, about 7 cents per supplier. So, back to Sara. This week: five emails. Three handled without her. She stepped in twice, both times to stop possible fraud. The Seal onboards suppliers, then guards them.”*

Tips

Wait for “Agent idle”
Each email takes 5 to 15 seconds to play out. The sidebar shows “Agent working” until it's done; then press **N**.

Rehearse freely
Press **R** any time. Every run replays recorded answers and costs nothing.

Keep the order
Use **N** to move forward. The recorded answers rely on the emails arriving in this order.

Recording in parts?
Don't press **R** between parts. Continue with **N**; **B** goes back one step for a retake.

Speed it up later
In editing, speed up the waits 2–4× so the video stays under 3:00.

Don't press “Process a new email”
It calls the paid API. While the app runs without a key it only shows a message.

If something goes wrong

What you see	What to do
The page doesn't load	The app isn't running. Start it with the Terminal command in “Before you record”.
“Agent working” for more than 20 seconds	Refresh the page (Cmd + R). If it still looks stuck, press `R` and run from the start.
“Something went wrong” in the activity	A step ran out of order. Press `R` and use only `N`.
Pressing `N` does nothing	Click once on an empty part of the page so it has keyboard focus, then press `N` again.
Terminal says “address already in use”	The app is already running. Just open http://localhost:8000/dashboard.
